

The Information Station

AEL/SEL Category 04AP-09-ALRT

Introduced by the Federal Communications Commission in 1977 as a Travelers' Information Station (TIS), the Information Station is now the most installed system of its kind in the United States, with more than a thousand stations licensed to date. Its popularity stems from its versatility and affordability in a package that makes installation and operation simple and seamless.

Today government agencies broadcast information to the public about emergencies, public health, airport security and border control – in addition to conventional traffic, travel and visitor information content.

Two models are available to meet your needs – IP and USB. Information Station Specialists is the sole provider of the Information Station in the United States and offers 24/7 remote technical support for the life of the product.

Two Stations . . .

IP Edition

Manage the broadcast program via an network network or locally using the station's front-panel controls. In an emergency, message files can be loaded physically via SD card with a USB adapter. The Information Station IP affords full 5000 Hz audio quality plus the convenience of a network-accessible message library. An optional Hybrid Package allows additional convenience and redundancy: both IP and USB methods are present plus the addition of a program mixer for live mic/live feed applications.

USB Edition

Update the broadcast program from a simple flash drive through the station's USB port. The USB Edition of the Information Station combines high quality 5000 Hz bandwidth with the convenience and flexibility of flash drive control. The length of the program is only limited by the flash drive size, so virtually any length and number of messages is feasible.

For both editions, audio creation software is provided to allow you to create, edit and process natural voice messages for broadcast. Archive the messages on the PC, laptop or device of your choice for quick call-up.

Who Operates Information Stations

Federal, state and local governmental entities (see examples below) can license Information Stations to broadcast noncommercial voice programming related to travel, public safety, visitor/tourism historical/interpretive or emergencies. Learn more on our Permitted Broadcast Content webpage under Resources on the drop-down menu at our website theRADIOsource.com. Who are primary listeners? Motorists in a 3-5-mile radius area.

Operators commonly include...

- **Municipalities** (cities, counties, townships, boroughs, towns and villages) departments of public safety, emergency management and public health.
- **Government agencies** (federal and state) departments of transportation, bridge authorities, emergency management and public health.
- **Points of entry** (airports, border protection, ports).
- **Outdoor recreation areas**, *e.g.*, national and state parks, forests, recreation areas and historic sites.
- **Universities and colleges.**

The National Park Service is among the first proponents of Information Station technology and is the largest nationwide user of these systems for visitor information, orientation and interpretive applications. Listen to what interpreters across the country say about how and why they operate Information Stations. Request a free program on CD produced by Oregon State University. Just email your name and postal address to info@theRADIOsource.com. (Please mention the title *Making Waves*.)

Frequency and Licensing

The FCC grants to government entities licenses on available AM frequencies on a first-come-first-served basis, secondary to full power broadcast stations. In 1991, the Commission opened to Information Stations all frequencies in the 530-1700 band, subject to separation requirements. Information Station Specialists can help identify the optimal frequency at your location and will apply for your station's FCC license.

Antenna Styles

The most common formats are described below.

Yard Style: The Information Station may be installed at a building with the electronics securely indoors and the antenna pole and groundplane located in the adjacent yard, connected by a coaxial cable. See a Yard-Style Illustration This style is a recommended first choice because it is most economical and affords the greatest security for equipment. A 50' separation from buildings is recommended. We can even provide the mounting pole for yard areas with limited room grounding.

Vail, CO, Police Department operates two Information Stations, controlling broadcasts from a PC.

Operator Jennifer Kirkland

Roof Style (flat): If no earth surface location is available, a flat building roof may be your best choice for antenna installation. We can provide an installation package which requires no roof penetrations.

Isolated Style: At remote locations where there is no building, a weatherproof cabinet containing the electronics is attached to the antenna support pole. The location must have electrical power and, if equipment is to be remotely controlled, telephone or network service.

Equipment Array

An Information Station can be installed by the buyer, his agent or as a service of Information Station Specialists. Included in the package is the FCC type-accepted transmitter, digital message system, cabinets, antenna, factory-assembled groundplane, lightning arrestors, cables, connectors, mounts, hardware and illustrated instructions.

Options

- **Flashing ALERT Signs** with remote-controlled flashing beacons may be installed to notify motorists of the station's signal at key locations along streets.
- **Hybrid option** for both USB and network-based audio control.
- **VP.9000 Vertical Profile Antenna Support and Grounding System** allows the antenna system to be located in tight spaces – the yard of a building, for example – with the station's electronics inside the building for security. No horizontal groundplane is required. VP9000 is compliant with hurricane wind standards for shoreline and critical installations.
- **2X Signal Booster** offers up to double the efficiency/range of a high band (1610-1700) station's antenna, allowing the transmitter to run at less wattage or allowing the signal to have up to twice the intensity (recommended for federal agencies and for operators in challenging environments who require maximum signal intensity to cut through dense foliage and obstructions).
- **StreamCASTs** This network audio interface allows streaming of the broadcast program directly to smartphones, tablets, laptops and PCs. Listeners gain access to the stream by merely scanning a QR tag or by clicking a unique link on your (or a special HearMoreInfo) website..
- **Signal Measurement Radio Receiver** allows you to measure the Information Station's signal intensity and verify compliance with FCC signal limits.
- **Cell Modem** for remote system control, when a wired network is not available.
- **Message Recording Services** at <https://www.theradiosource.com/services/recording.htm>.

Details about the above options are available on the Information Station specifications webpage at www.theRADIOsource.com.

Complete Package

As you would expect, Information Station Specialists provides a full menu of technical services to help you put and keep your Information Station on the air. We will help plan and implement your station, including frequency and site selection, FCC licensing, installation, staff training and the FCC-required field survey and documentation.

Even professionally recorded audio messages can be provided, so your broadcast is ready to place on the air as soon as the station is turned on.

Best of all, each system comes with remote technical support and potential interference notification service for the life of the product.

Sole Source. We frequently are the only source for the products and services we offer and can send you support letters to affirm that for your purchasing documentation. Competitive Process. If you must seek competitive bids or quotes, we can supply specifications (in text form) so you can easily integrate them into bid documents. Purchases by governmental entities can be made by purchase order, agency order on letterhead, VISA/MC (up to \$3,500) or simply by signing and returning our quote sheets. Standard terms are Net 30 days.
